

I wholeheartedly support allowing all coordinators to coordinate all frequencies under 470 MHz. Currently, municipalities must utilize multiple coordinators to coordinate their various licenses.

This often causes double-billing when the application is sent to the wrong coordinator.

Municipalities are responsible for multiple functions and need to be able to rely on a single coordinator to serve their total frequency coordination needs.

In addition, this would enhance a limited form of competition between coordinators which could lower the price of coordination and the cost of local government.
